

10

WAYS YOU BENEFIT BY USING EVERPURE PRECOAT FILTERS!

- 1 Good tasting beverages that stimulate repeat sales.**
A unique filter blend using activated carbon, removes chlorine and other offensive tastes and odors to produce quality ingredient water.
- 2 Screens stay clean...solenoids last longer.**
Fine filtration removes particles as small as 1/2 micron—particles so small they can't be seen with the naked eye!
- 3 Quality of product water always remains uniform.**
Pressure fluctuations never cause "dumping" of accumulated dirt trapped by the filter.
- 4 Deliming costs are reduced.***
Proportioned feeding of scale inhibitor dramatically prevents lime-scale build-up in equipment.
- 5 Proper feeding of scale inhibitor assured*.**
The filter is designed to always feed the correct amount of scale inhibitor into each volume of water—never less than is needed, never so much that a bitter taste or added scale results.
- 6 Possible health hazards removed.**
Asbestos fibers and other potentially harmful contaminants, such as *Cryptosporidium* and *Giardia* cysts, are mechanically filtered out of incoming water.
- 7 Plumbing code requirements satisfied.**
A check valve built into each cartridge insures that accumulated impurities trapped in the filter can't backflow into community water lines.
- 8 Sanitary cartridge replacement.**
There's no need to break the water line, opening it to contamination. And, internal filter parts are never exposed to handling.
- 9 Cartridge replacement is simple, quick, clean.**
Cartridges can be changed in about 15 seconds, without tools and without breaking the water line or creating a mess.
- 10 Downtime is minimized.**
Very little time is needed for filter servicing, thanks to a shut-off valve built into each filter and quick-change cartridges.

These benefits, and others offered by Everpure Precoat filters, have solved water quality problems brought to us by people like you throughout our 65 years of service. For free consultation on your water quality problems, call:

*Does not apply to 4C filter cartridges which are designed for use on cold beverage machines.
